

NAME

`mk_index_html` – Create a static HTML index page for directory or file list

SYNOPSIS

`mk_index_html` [*option*]... [*file*]...

DESCRIPTION

Creates a static HTML index page for use in web applications, based on a file list if given, else based on the current working directory.

`mk_index_html` will enable LightBox image browsing for .png or .jpg files found in file list or directory. In this case, a subdirectory with support files for LightBox is created.

OPTIONS

-a *address*

Use *address* as page footer information. Default is 'Max-Planck-Institut für Meteorologie'

-b Set up a *base* index page for top-level directories. Equivalent to '`-f Directory -s -t Index -u`'.

-f *file_header*

Use *file_header* as header of the file name column. Default is 'File'.

-i *file_name*

Use *file_name* as name for the index file. Default is 'index.html'.

-p Use the full *path* to the current directory when replacing '*%s*' in title (see **-t**)

-s Suppress file *size* information.

-t *title*

Use *title* as title for the index file. '*%s*' within *title* is replaced by the current directory name. Default is "Index of '*%s*'",

-u Suppress *up* link to higher index level.

-I Suppress use of 'index.html' in links.
